

UNCERTAINTY / RELIABILITY OF LANDSLIDE HAZARD MAPPING & RISK ASSESSMENT

By

Chang-Jo F. Chung Geological Survey of Canada, Ottawa, Canada

► Time & Place: Thursday, March 11, 2004 1-3 PM. Auditorium 3240A Bldg. 3.

Dr. Chung will discuss the estimation of the probability of landslide occurrence and the reliability of the estimates. The reliability estimate is important in assessing the economic consequences of the landslide risk. The risk assessment techniques will be illustrated with two case studies, one in the La Baie area, Québec, Canada and the other in the Boeun area, Korea.
